

Figure 1 is a line graph showing the age at death (min) for four groups of mice: control (green), 100 mg/kg (orange), 200 mg/kg (blue), and 400 mg/kg (yellow). The x-axis represents age at death in minutes, ranging from 0 to 600. The y-axis represents the number of mice, ranging from 0 to 10. All groups show a sharp decline in survival starting around 240 minutes, with the 400 mg/kg group showing the earliest and steepest decline.

| Age at death (min) | Control (green) | 100 mg/kg (orange) | 200 mg/kg (blue) | 400 mg/kg (yellow) |
